

NWS Medford: Wind, Moderate to Heavy Rain Today and Tomorrow

The next front arrives today and will bring strong winds to areas east of the Cascades, the Shasta Valley, the Rogue Valley, and the coast. A High Wind Warning has been issued for the Shasta Valley this afternoon and going through Thursday morning. A Wind Advisory has been issued for areas east of the Cascades and the Rogue Valley. Periods of moderate to heavy rain are also forecast along the coast and into NorCal starting tonight and into Thursday. Siskiyou County likely to see the highest totals. Lighter rain will occur farther north and east. Rain amounts do not appear to be heavy enough for widespread areal flooding; however, minor nuisance flooding and/or ponding of water on roadways could pose a hazard. Rain will be the main form of precipitation until snow levels fall to ~4,500-5,000 feet Thursday night, bringing very light amounts of snow to the Cascades. Overall, we are not anticipating much snowfall with this event and the Cascades may only see 1-2 inches of snowfall. After, there will be lingering rain chances Friday and to start the weekend. Details on expected impacts through this week are below.

KEY POINTS

- **Today's Wind:** The front will bring breezy to windy conditions, especially for the Shasta Valley. Forecast gusts of 40-60 mph. Eastside areas and the Rogue Valley could see gusts up to 40 mph.
- **Today/Tonight Rainfall:** Please see graphics below for further details on total forecast rainfall and 24hr probabilities. Heaviest amounts expected across northern California and Curry County. Siskiyou County likely to receive the highest totals.
- **Overall, not expecting widespread flooding, but nuisance type flooding with ponding on roadways expected.**
- **Thursday:** Showers continue, lighter rainfall at the coast and in Nor Cal.
- **Thursday night:** Snowfall continues to decrease with only a 15% probability for 2.0" or greater across the Cascades.
- **Friday-Saturday:** Post-frontal showers, colder temperatures

CHANGES FROM PREVIOUS BRIEFING

There remains uncertainty with this system as diverging solutions still exists between various computer models. Overall, there still remains impacts from both wind (warnings/advisories) and rainfall (nuisance flooding). There may be additional changes over the next 24 hours but below are our current thoughts. The biggest changes could occur along/near the coast as the system trajectory becomes clearer and could change wind hazards. That would be the biggest change coming over the next 24 hours.

WEATHER RISK OUTLOOK

Risk levels incorporate potential impacts from weather hazards and likelihood of occurrence for a reasonable worse case scenario.

	Wed 11/12	Thu 11/13	Fri 11/14	Sat 11/15	Sun 11/16
